DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 14-19 are rejected under 35 U. S. C. 102(b) as being anticipated by Kenney (US Pat. 4,326,332).

Regarding claim 14, Kenny discloses an integrated circuit device comprising: an integrated circuit substrate 10; an insulating layer 16b on the integrated circuit substrate 10 (col. 3, lines 53-55); a first conductive layer pattern 24 including a sidewall, on the insulating layer 16b opposite the integrated circuit substrate 10 (col. 5, lines 32-35 and fig. 8); a thermal oxide layer 34 (col. 5, lines 52-55 and fig. 10) on the integrated circuit substrate 10 and directly on the sidewall of the first conductive layer pattern 24; a buried doping layer 30 in the integrated circuit substrate 10 beneath the thermal oxide layer 34 (col. 5, lines 48-51 and fig. 10); and a second conductive layer pattern 36 (fig. 12) on at least a portion of the thermal oxide layer 34 and on at least a portion of the first conductive layer pattern 24.

Regarding claim 15, Kenny discloses that the second conductive layer pattern 36 is directly on the first conductive layer pattern opposite the insulating layer (fig. 12).

Regarding claim 16, Kenny discloses that the first and second conductive layer 24/36 patterns both comprise polysilicon (col. 5, lines 5-9 and col. 5, line 67 through col. 6, line 3).

Regarding claims 17 and 18, Kenny discloses a programming region in the integrated circuit substrate, wherein the programming region comprises an implant region (col. 5, lines 44-48).

Regarding claim 19, Kenny discloses that the second conductive layer pattern 36 is not directly on the sidewall of the first conductive layer pattern 24 (fig. 12).

The Examiner has not given patentable weight to the preamble limitation of "Read Only Memory (ROM) device" because "[A] claim preamble has the import that the claim as a whole suggests for it". *Bell Communications Research, Inc. v. Vitalink Communications Corp.*, 55 F.3d 615, 620 (Fed. Cir. 1995) "If the claim preamble, when read in the context of the entire claim, recites limitations of the claim, or, if the claim preamble is 'necessary to give, life, meaning, and vitality' to the claim, then the claim preamble should be construed as if in the balance of the claim." *Pitney Bowes, Inc. v. Hewlett-Packard Co.*, 182 F.3d 1298, 1305 (Fed. Cir. 1999). As the body of the claim makes no reference, nor allusion, to Read Only Memory (ROM) device (i.e. - the preamble does not recite limitations of the claim), and since the above referenced preamble limitation does not give life or meaning to the claim, it is deemed to be of no patentable weight. See MPEP § 2111.02.
